Summary

I am a product-minded engineer who has spent the last year building things people actually use. At Betterway Ayurveda, I sat with practitioners, watched how they filled EMR records, spotted an 80-second friction point per session, wrote the PRD, and lead the development till its completion. At CVNT, I mapped checkout journeys, picked the payment and OTP vendors, caught a race condition before it hit users, and set up the analytics so the team could keep improving without needing an engineer every time. I am comfortable writing SQL, reading a codebase, wireframing and prototyping in Figma, and presenting to stakeholders, which means I can close the gap between what a product needs and what engineering can deliver without things getting lost in translation.

Education

Indian Institute of Information Technology (IIIT), Ranchi

2022 – 2026 | CGPA: 7.15

Bachelor of Technology (B.Tech) in Electronics and Communication Engineering

Experience

Betterway Ayurveda – SDE Intern

Jan 2026 – Present | Gurugram, Haryana

SQL · Retool · Figma · Google Analytics · Postman · TypeScript · Notion · AWS · Notion

- Ran user research with 3 in-house Ayurvedic practitioners to map EMR filling journeys, identified key friction points, and authored a **PRD** covering problem statement, solution scope, and success metrics; drove implementation of a contextual recommendation engine on historical prescription data, cutting average EMR entry time by **80 seconds per session** and improving practitioner throughput.
- Identified billing fragmentation across consultation, medicine, and Panchkarma workflows as the core operational bottleneck; defined product requirements and led end-to-end delivery of a **unified Packages Billing System** in collaboration with engineering and ops, reducing operational complexity by **30 to 35%**.
- Owned UI/UX design and frontend implementation for multiple EMR and service app components, designed in **Figma** and shipped end to end, removing handoff gaps between product and engineering and consistently delivering at higher fidelity than specced.
- Wrote SQL queries and built **Retool dashboards** tracking feature adoption, workflow drop-offs, and operational KPIs, cutting manual reporting effort by **50%** and enabling data-driven iteration across the team without analyst dependency.
- Owned infrastructure cost tracking across AWS, WATI, Typesense, and Sarvam AI; built an **MIS reporting framework** that standardised monthly tech spend visibility for stakeholder and leadership reviews.

CVNT Fashion & Apparel – SDE Intern

Oct – Dec 2025 | Remote

SQL · Figma · Google Tag Manager · Google Analytics · GSAP · Notion

- Defined end-to-end checkout and onboarding user journeys; led vendor evaluation and owned the full integration of **Razorpay** for payment processing and **Combirds OTP** for mobile verification, prioritising an OAuth + OTP auth flow to reduce sign-up friction and ensuring both services held up reliably under concurrent load before go-live.
- Integrated **Google Tag Manager** with structured event schemas to enable funnel tracking and checkout drop-off analytics, then analysed the data to validate friction hypotheses and ship targeted UX fixes without requiring further engineering involvement.
- Caught a critical race condition in concurrent signup flows before the platform went live; defined the **Check-Create-Retry** business logic, coordinated implementation with engineering, and shipped the fix pre-launch with zero onboarding failures recorded post go-live.
- Designed and built a responsive frontend from scratch with **GSAP motion design** across auth and cart flows, guiding user attention through key conversion steps and elevating the overall product experience.

Projects

NK Consultancy — CA Consultancy Platform

Jul – Sep 2025

MERN · SQL · Market Research · GTM Strategy · Razorpay · Cloudinary · Recharts

- Conducted discovery interviews with my father and his clients to surface a real problem: fragmented document workflows and manual status checks were consuming **40% of non-billable time**. Defined MVP scope around service discovery, document submission, and payment, then led end-to-end delivery of a platform that onboarded **52 new clients** in one season and contributed **30% of annual revenue**.
- Built a **JSON-driven dynamic form engine** that renders any new CA service workflow from metadata configuration alone, enabling zero-dev onboarding of new services and laying the groundwork for a multi-tenant SaaS model.
- Designed and developed two distinct user experiences: a **high-density admin workspace** and a **self-serve client portal** with real-time filing visibility, reducing administrative lead times by **40%**.

Skills and Tools

Product: PRD writing, user research and interviews, feature prioritisation, product roadmapping, hypothesis validation, A/B testing concepts, funnel analysis, metrics and KPI definition, GTM strategy, competitive analysis

Analytics and Data: SQL, Mixpanel, Google Analytics, Google Tag Manager, Retool, Excel and Google Sheets

Design and Collaboration: Figma, UX principles, mobile-first design, information architecture, usability testing, Notion, Jira

Technical Foundation: TypeScript, JavaScript, React.js, Next.js, Node.js, PostgreSQL, MongoDB, RESTful APIs, AWS S3, Git

Business and Strategy: Market sizing (TAM/SAM/SOM), unit economics, business model understanding, basic financial literacy, stakeholder alignment, executive presentation

Achievements

- Independently drove GTM strategy and offline outreach for a CA firm, growing annual revenue by **30%**, then built and shipped a full-stack platform that onboarded **52 new clients** in a single season, validating both the product decision and the go-to-market execution.
- Secured **Rank 3** in the college's internal Smart India Hackathon round; led problem scoping and solution architecture as part of a 6-member team under a 48-hour constraint.
